THE SECURITY THREAT

- 86% of all computers are missing critical security patches, have out-of-date anti-virus software, or have disabled firewalls
- Malicious code threats increased by 165% from 2007 to 2008. Trend continuing in 2009
- Malware dramatically slows down end user computers (decreasing employee productivity)
- Cyber attacks increased by 40% in 2008 resulting in loss of profits, intellectual property and employee productivity.
- 1 new infected webpage every 4.5 seconds
- Average company encounters virus infections at a monthly rate of 1 for every 5 networked machines
- Non-work related internet surfing results in up to a 40% loss in production each year
- The average employee spends over 75 min per day using office computers for non-business activity
- 70% of all web traffic to internet pornography sites occurs during the work hours of 9am-5pm
- \$1 trillion in intellectual property was lost in 2008
- >280 million records stolen in 2008
- Unauthorized intrusions cost more than \$70k a year per company
